PROFESSIONAL SUMMARY

Final-year MCA student with a strong foundation in HTML5, CSS3, and JavaScript. Independently built and shipped three real-world web projects, including an offline agricultural management app used by actual farmers and an AI-assisted fake job detector. Comfortable leveraging AI development tools (Claude AI, Anti-Gravity AI) to plan, build, and deliver complete web applications efficiently. Currently learning Python. Eager to join a frontend team where I can apply my skills, learn on the job, and grow into a full-stack developer.

TECHNICAL SKILLS

Core Skills: HTML5, CSS3, JavaScript (ES6+)
Frontend: Responsive Design, DOM Manipulation, CSS Grid, Flexbox.
Currently Learning: Python (basics complete)
Tools: Git, Vercel, VS Code, Chrome DevTools
AI Dev Tools: Claude AI, Anti-Gravity AI, Gemini API (used in project workflows)
Soft Skills: Problem-Solving, Adaptability, Quick Learner, Lateral Thinking

Note: React.js, Node.js, Flask, and MongoDB were used in project development via AI-assisted workflows. I handled all planning, feature decisions, integration, and testing — I am actively learning these frameworks formally.

PROJECTS

SmartUzhavan – Agricultural Business Management App

Ongoing

Tech Stack: HTML, CSS, JavaScript, LocalStorage | **AI-assisted tools:** Claude AI, Anti-Gravity AI

- Designed and built a Tamil-first offline web app for rural farmers and machinery business owners, fully replacing manual paper-based record-keeping.
- Built as a mobile-first Single Page Application (SPA) with automated billing, income/expense tracking, diesel usage monitoring, and daily wage calculations.
- Created role-based workflows for three user types — Admin, Drivers, and Farmers — each with dedicated dashboards and access controls.
- Engineered a unique Bill ID system for every transaction, enabling full traceability and audit history for the business owner.

FinTrack – Personal Finance Tracker

March 2026

Tech Stack: Pure HTML5, CSS3, JavaScript — Zero dependencies | GitHub

- Built entirely from scratch in vanilla HTML/CSS/JS with no libraries or frameworks, demonstrating solid core frontend fundamentals.
- Features include income/expense logging, category-wise breakdown, and a visual summary dashboard using dynamic DOM manipulation.
- Responsive layout using CSS Grid and Flexbox, optimised for daily usability across all screen sizes.

JobCheque – AI-Based Fake Job Offer Detector

January 2026

Tech Stack: React.js, Node.js, Python, Flask, Scikit-learn, MongoDB | **AI-assisted:** Claude AI, Anti-Gravity AI

- Conceptualised and led development of a web app to detect fraudulent job postings targeting common Indian job scam patterns.
- Delivers a clear verdict — Genuine / Suspicious / Fake — with a confidence score using an ML detection engine.
- Integrated live domain verification to cross-check employer legitimacy in real time alongside ML-based text analysis.
- Handled all feature planning, UI decisions, model integration, and testing independently; AI tools used as development accelerators.

EDUCATION

Master of Computer Applications (MCA)

MASS College of Arts and Science, Kumbakonam, Tamil Nadu

June 2024 – Present

Bachelor of Science in Chemistry (B.Sc.)

St. Joseph's College (Autonomous), Tiruchirappalli, Tamil Nadu

June 2021 – May 2024

CERTIFICATIONS

- HTML5 – The Language | Infosys Springboard | March 29, 2026
- CSS3 | Infosys Springboard | March 31, 2026
- JavaScript | Infosys Springboard | April 2, 2026
