## PROFESSIONAL SUMMARY

Final-year MCA student with hands-on experience building production-grade software solutions across Android and full-stack web development. Skillful in JavaScript, HTML, and CSS, with foundational knowledge in Java and the ability to learn new programming languages and frameworks as project requirements evolves or if needed. Developed two AI-assisted projects using modern AI tools and platforms, Creating and demonstrating strong ownership from idea conception through final implementation. Eager to contribute to a collaborative development team in an entry-level software, web, or Android development role.

## TECHNICAL SKILLS

**Languages:** Java (Learning), JavaScript, HTML, CSS  
**Web & Backend Used:** Node.js, Express.js, React.js, Flask, MongoDB, REST API  
**AI Tools:** Gemini API, Anti-Gravity AI, Claude AI  
**Tools:** VS Code, Gradle (Kotlin DSL), Git, Eclipse  
**Soft Skills:** Adaptability, Quick Learner, Problem-Solving, Lateral Thinking

## PROJECTS

### 1. Focus Guardian - Digital Well-Being & Focus Management App Dec 2025 - present

*Tech Stack: Kotlin, Jetpack Compose, Node.js, Gemini API | Tools: Anti-Gravity AI, Claude AI, VS Code*

- Independently conceived and built this as my first Android application - translating a personal idea into a fully functional app that helps users manage screen time, block distracting apps and content, and improve focus through customizable modes and real-time usage tracking.
- Integrated AI-powered recommendations via the Gemini API to deliver personalized digital wellness insights; built end-to-end using Anti-Gravity AI and Claude AI as development accelerators, with complete personal ownership over idea design, feature decisions, and final implementation.

### 2. JobCheque - AI-Based Fake Job Offer Detector Jan 2026

*Tech Stack: React.js, Node.js, Python, Flask, Scikit-learn, MongoDB | Tools: Anti-Gravity AI, VS Code*

- Conceptualized and built a web application to detect fraudulent job postings targeting common Indian job scam patterns, providing users with a clear verdict (Genuine / Suspicious / Fake) along with a confidence score.
- Engineered an ML-based detection engine with live domain verification; developed with Anti-Gravity AI and Claude AI as co-development tools, applying independent judgment throughout feature selection, model integration, and final adjustments.

## EDUCATION

|                                                                                                       |                                                            |

| <b>MASS College of Arts and Science</b><br><i>Master of Computer Applications (MCA)</i>               | Kumbakonam, Tamil Nadu<br><b>June 2024 - Present</b>       |
| <b>St. Joseph's College (Autonomous)</b><br><i>Bachelor of Science in Chemistry (B.Sc. Chemistry)</i> | Tiruchirappalli, Tamil Nadu<br><b>June 2021 - May 2024</b> |

## CERTIFICATIONS & ACHIEVEMENTS

- Attended the 5th International Conference on "Multidisciplinary Research and Advanced Computational Methods" held on 17<sup>th</sup> February 2026, organized by the Department of Computer Science, Idhaya College of Women (Autonomous), Kumbakonam - gained valuable exposure to advanced AI-driven research methodologies and computational techniques across multidisciplinary domains.
